The index consists of two parts: subject and author. Both are listed alphabetically, with the reference giving first the issue, then the page number, and finally the type of article. For example, checking under "discipline" gives the reference "M/J, 13-14, N." This indicates that on pages 13 and 14 of the May/June issue, there is an item in News about discipline.

President's Message

continued from page 3

with little demonstrable benefit to the industry or the public.

I have communicated to the Minister of Municipal Affairs and Housing that the engineering profession does not support these legislative changes for the above reasons, and have asked that he suspend their implementation to allow us time to work with other key stakeholders to develop a workable approach that will address the real problems of building regulation.

At the same time, we must be prepared to demonstrate leadership in addressing those aspects of the process within our purview by reinforcing our own regulatory regime, as Ontario's architects have already done. We must be able to demonstrate that our members who submit plans have up-to-date knowledge of and remain compliant with all applicable standards and codes, as our Act requires. We should be prepared to implement an informal dispute resolution mechanism that can respond quickly to complaints from building officials, and hopefully resolve them without recourse to our full complaints and discipline process. And we should accept the need to mandate liability insurance for practitioners.

Designers and building officials should work together with the ministry to clarify lines of responsibility and accountability before they become even more complicated with the introduction of an objective-based building code. Finally, we should call on the government to make the necessary legal changes to support an appropriate liability insurance regime under which all participants in a building project share proportionally to their involvement in the project in the liability for defects beyond the warranty period, instead of just the designers as is the situation under the BCA.

I believe these initiatives will accomplish much more to address the real problems of building regulation than the measures introduced by Bill 124, and at less cost to society.
