

Lisa MacCumber, P. Eng., FEC, OOH

Re-elect Lisa MacCumber for West Central Regional Councillor

I am looking for your support to continue the important transformational work that PEO council has started. I will continue to remain highly engaged and provide direction and oversight to ensure our profession remains a strong, relevant and self-regulated profession.

The Council I currently serve on, has taken the bold and courageous first step towards modernizing ourselves by measuring our regulatory performance through an external regulatory review conducted by the Professional Standards Association against Standards of Good Regulation. PEO only fully met 8 of 22 standards related to licensing and registration, complaints, discipline, compliance, enforcement, guidelines and practice standards. The results of the external regulatory review have been shared publicly, including the Attorney General and the Ontario Fairness Commissioner. I want to continue to ensure that the recommendations are carefully implemented and will put the public interest mandate under our Act, first.

My vision for PEO is to transform it to become a modern regulator that ensures the following:

- Improved governance structure;
- Is accountable through the use of service standards and performance metrics;
- Uses evidence-based data to develop policy;
- Fully understands the problem before coming up with solutions;
- Becomes agile adapting to rapid change;
- Is transparent and non-biased;
- Utilizes member strengths and knowledge appropriately in self-regulation;
- Provides timely and strategic communication to members and the general public related to changes; and
- Promotes equity, diversity and inclusion that reflects our membership in everything we do.

Vote for an experienced engineer who is committed to transformation through effective change management that will be a valuable resource to assist PEO with our core mandate to regulate Engineers in Ontario. I have extensive experience in engineering and regulatory change management and know what works and what doesn't work. My broad engineering experience in both the public and private sector, developing complex regulations, demand side/qualified persons regulation; and in evidence based public policy, which includes extensive stakeholder

engagement, implementation, accountability, financial analysis and enforcement will continue to be a valuable voice at the PEO Council table.

I am counting on your Vote, to have my voice heard at Council so PEO can remain relevant, respond appropriately to public scrutiny, and allow engineers to own their future.

My Background:

Education: Bachelor of Science, Chemical Engineering, Queen's University

Years Registered in Ontario: 17

Employment Experience:

- Senior Engineer, Ministry of the Environment, Conservation and Parks
- Team Lead, Advanced Manufacturing Branch, Ministry of Economic Development
- Project Engineer, Magna
- Product Development Engineer, NRI Industries
