

EBlast 2. Patrick Quinn P.Eng.

Self discipline is not a right, and like democracy, it is fragile and must be protected and promoted. **PLEASE VOTE.**

Our Council is resistant to change, and PEO is under-regulating using the tools of 1922 to regulate in a modern world.

We need to answer these questions:

1. What role should the engineering profession play in a modern disruptive world?
2. Where does regulation fit?
3. Can we regulate without knowing where our members work and at what?
4. Don't we need a modern definition of engineering, and of an engineering discipline?
5. What place do PEO and OSPE, individually or as partners, have in the change process and the end product?
6. Should educators be brought into the discussion?
7. Does accreditation have a place in the end result?
8. How do we bring to bear the critical thinking, planning and strategies, to answer these questions?
9. Have we a Council that can drive quick progress by trust-worthy discussions and inspirational leadership?

10. If you don't vote for councillors who care, how much longer will we be self-governed?

PLEASE VOTE NOW.
