

I have many thoughts to express on my career passion and way of living life.

We are all licensed engineering professionals with knowledge, abilities and personnel suitability which is to be respected. Volunteering with Peo brings contact and rewards personally as we attempt to bring understandable improvements. Helping with license application questions and difficulties, hearing discipline cases, accreditation audits of engineering schools within Ontario and the governance potential changes of our Peo.

My passion to help engineers includes being the national president of the Pipsoc federal government nr engineers. Negotiating collective agreements with the treasury board and gaining professional recognition for engineers. Helping with career decisions and job difficulties. Please vote for federal government engineers in the Pipsoc and Peo elections. Pipsoc provides an advocacy service. Eastern region includes 1,200 members plus federal government engineers! Your vote will make a difference.

Our challenge is to understand the proposed governance changes which could reduce licensing to a narrow definition of regulated engineering. Will the organization reduce their membership to the narrow definition? How would that affect your license?

During the 2021 Peo agm five member motions were passed for Peo council to consider on governance. The current Peo council discussed and rejected all five motions.

It's difficult to understand how members motions and simple consultation with members has not been included in critical governance decisions.

We all are licensed engineering professionals and should have our thoughts and talents considered.

Please vote!

Your vote matters. Be heard and ask your engineering contacts to vote too!

Tim Kirkby, P.Eng., F.E.C. Eastern Region Councillor- Acclaimed 2022.
