

CK PEO PRESENTS: ENERGY RETROFITS 101 – LUNCH & LEARN

"Energy retrofits" refers to a variety of activities centered around changing the way we use energy - using it more efficiently, using a different source, and sometimes using more. This includes modernized building envelopes, high performance mechanical systems and automation. Government and utility programming traditionally drive a lot of this work. Technology innovation, climate policy, and the vast amount of substandard housing is placing an even greater emphasis on it.

This presentation and discussion will provide a broad overview of the topic, how it ties back to professional engineering, and several real, recent examples of projects centered around changing uses of energy in building

Dr. Tom Grochmal, P.Eng, is the founder of Trim Tab Inc, an energy contractor with a mission to renew housing and inspire better living. He was previously employed by Union Gas/Enbridge in roles spanning engineering design, construction, and demand side management

**November 20th
11:45-1:00**

**Mamma Maria's
Ristorante**

**Join us in person,
virtually or watch the
recording!**

**Event is free – lunch
available to
purchase**

**If applicable, count
this towards your
CPD hours!**

**Register Here
by Nov. 17**
